Go Green, Not Broke

When most people think of going green they think of helping prevent global warming. But going green also has other advantages. Take kitchen cleaner for example. If you just use a normal kitchen cleaner you could get thyroid disorders, you could have an allergic reaction, or you could get a type of cancer from the chemicals in the cleaner. But “green” cleaners don’t have those harmful chemicals in them. Click on the link to find affordable “green” products.

The steep prices on some eco cleaners and organic sheets can make green living seem like a luxury few can afford. But if you consider the surprising range of household items that contain dangerous toxins—which scientists say could lead to [allergic reactions](#), thyroid disorders, even cancer—going green starts to sound as much a health priority as an environmental one.
