Over-the-Counter Pain Relievers Linked to Hearing Loss - AOL Health

Many wives blame their husbands poor hearing on selective hearing (only hearing what they choose to hear) but a new study has shown that poor hearing maybe the cause of common over the counter medication. Pain relievers like acetaminophen or ibuprofen taken just twice a week is enough to increase your risk of hearing loss. Click on the link below for the full article.

Plenty of women suspect their husbands of selective [hearing loss](#), but it could be your spouse's failure to respond to your overtures to help with the dishes might be more legitimate than it appears.
