Esophageal cancer rates rise steeply in British men

If you are British I want to start off by saying you have an awesome accent! And second of all even though you have a cool accent, a study has shown you may have a high chance of having esophageal cancer, especially if you are a little of weight. Click on the link to find out more about this new study.

Rates of [esophageal cancer](#) in men have risen by 50 percent in Britain in a generation, an increase that is probably being driven in part by growing rates of [obesity](#) and poor diet, scientists said on Saturday.
